

Mini-Project: UIDW – Lab for Even Roll numbers

An Event or Conference Webpage: EVENT is a contemporary, one page, responsive HTML template design ideal for any event, conference, meet up, summit, camp and many more. With EVENT, your next conference website could be world-class. It's designed to provide useful information about your event. You can make a static page holding an event or conference.

- ✓ People who are interested in attending the conference create a register button for them.
- ✓ Mention different links for speaker, venue and schedule at the top in the header section.
- ✓ Describe the purpose of the conference or the category of people who can get benefit from this conference.
- ✓ Add an introduction and images of the speaker, venue detail and the main purpose of the conference on your webpage.
- ✓ Divide the page into sections, add header and footer showcasing the menu.
- ✓ Use proper background color that can go well with each other for various sections.
- ✓ Choose a decent font style and font color that matches the theme of your web page.

The website must make use of the following technologies.

- HTML
- CSS
- JAVASCRIPT

The website must have at least 5 web-pages. The extra web-pages can be added if required. The website must make use of the following concepts (see the requirement section).

The project requirements:

- Web-page must use semantic tags like header, footer, main, nav, section, aside etc.
- The pages must be very attractive and user friendly. So, make use of CSS smartly and apply margins, paddings and positions.
- At least two web-pages must use FLEX. Try to use FLEX on the home page.
- There must be one motivation video embedded on the home page.

- Use Java Script smartly wherever required. At least one web-page must use Java Script. The concepts like functions, arrays and event handling should be deployed.

Note: Do not copy paste readymade code and templates.
