Developer Report

Acunetix Security Audit

05 February 2021

Scan of beta.cug.ac.in

Scan details

Scan information	
Start time	05/02/2021, 12:39:09
Start url	http://beta.cug.ac.in/
Host	beta.cug.ac.in
Scan time	26 minutes, 25 seconds
Profile	Full Scan
Server information	Apache/2.4.41 (Ubuntu)
Responsive	True
Server OS	Unix

Threat level

Acunetix Threat Level 3

One or more high-severity type vulnerabilities have been discovered by the scanner. A malicious user can exploit these vulnerabilities and compromise the backend database and/or deface your website.

Alerts distribution

Alerts details

🛑 Blind SQL Injection

Severity	**High**
Reported by module	/Scripts/PerScheme/Blind_Sql_Injection.script

Description

SQL injection (SQLi) refers to an injection attack wherein an attacker can execute malicious SQL statements that control a web application's database server.

Impact

An attacker can use SQL injection it to bypass a web application's authentication and authorization mechanisms and retrieve the contents of an entire database. SQLi can also be used to add, modify and delete records in a database, affecting data integrity. Under the right circumstances, SQLi can also be used by an attacker to execute OS commands, which may then be used to escalate an attack even further.

Recommendation

Use parameterized queries when dealing with SQL queries that contains user input. Parameterized queries allows the database to understand which parts of the SQL query should be considered as user input, therefore solving SQL injection.

⚠️ Directory listing

Severity	**Medium**
Reported by module	/Scripts/PerFolder/Directory_Listing.script

Description

The web server is configured to display the list of files contained in this directory. This is not recommended because the directory may contain files that are not normally exposed through links on the web site.

Impact

A user can view a list of all files from this directory possibly exposing sensitive information.

Recommendation

You should make sure the directory does not contain sensitive information or you may want to restrict directory listings from the web server configuration.

⬤ Virtual host directory listing

Severity	**Medium**
Reported by module	/Scripts/PerServer/VirtualHost_Audit.script

Description

This web server is responding with a directory listing when the Host header is manipulated and various common virtual hosts and/or IP addresses are tested. This is a web server misconfiguration and should be fixed as it may disclose sensitive information to an attacker. Consult Attack details for more information.

Impact

Possible sensitive information disclosure.

Recommendation

Fix virtual hosts configuration to resolve this problem.

⚠ Vulnerable Javascript library

Severity	**Medium**
Reported by module	/Scripts/PerFile/Javascript_Libraries_Audit.script

Description

You are using a vulnerable Javascript library. One or more vulnerabilities were reported for this version of the Javascript library. Consult Attack details and Web References for more information about the affected library and the vulnerabilities that were reported.

Impact

Consult References for more information.

Recommendation

Upgrade to the latest version.

ⓘ Clickjacking: X-Frame-Options header missing

Severity	**Low**
Reported by module	/Scripts/PerServer/Clickjacking_X_Frame_Options.script

Description

Clickjacking (User Interface redress attack, UI redress attack, UI redressing) is a malicious technique of tricking a Web user into clicking on something different from what the user perceives they are clicking on, thus potentially revealing confidential information or taking control of their computer while clicking on seemingly innocuous web pages.

The server didn't return an **X-Frame-Options** header which means that this website could be at risk of a clickjacking attack. The X-Frame-Options HTTP response header can be used to indicate whether or not a browser should be allowed to render a page inside a frame or iframe. Sites can use this to avoid clickjacking attacks, by ensuring that their content is not embedded into other sites.

Impact

The impact depends on the affected web application.

Recommendation

Configure your web server to include an X-Frame-Options header. Consult Web references for more information about the possible values for this header.

ⓘ Possible sensitive directories

Severity	**Low**
Reported by module	/Scripts/PerFolder/Possible_Sensitive_Directories.script

Description

A possible sensitive directory has been found. This directory is not directly linked from the website.This check looks for common sensitive resources like backup directories, database dumps, administration pages, temporary directories. Each one of these directories could help an attacker to learn more about his target.

Impact

This directory may expose sensitive information that could help a malicious user to prepare more advanced attacks.

Recommendation

Restrict access to this directory or remove it from the website.

ⓘ Email address found

Severity	**Informational**
Reported by module	/Scripts/PerFolder/Text_Search_Dir.script

Description

One or more email addresses have been found on this page. The majority of spam comes from email addresses harvested off the internet. The spam-bots (also known as email harvesters and email extractors) are programs that scour the internet looking for email addresses on any website they come across. Spambot programs look for strings like myname@mydomain.com and then record any addresses found.

Impact

Email addresses posted on Web sites may attract spam.

Recommendation

Check references for details on how to solve this problem.

ⓘ Error page web server version disclosure

Severity	Informational
Reported by module	/Scripts/PerServer/Error_Page_Path_Disclosure.script

Description

Application errors or warning messages may disclose sensitive information about an application's internal workings to an attacker.

Acunetix found the web server version number and a list of modules enabled on the target server. Consult the 'Attack details' section for more information about the affected page.

Impact

Error messages information about an application's internal workings may be used to escalate attacks.

Recommendation

Properly configure the web server not to disclose information about an application's internal workings to the user. Consult the 'Web references' section for more information.
